PROFESSIONAL SUMMARY

Backend Engineer with experience building fintech platforms, payment gateways, and enterprise systems. Specialized in designing secure APIs, microservices architecture, and integrating modern applications with legacy infrastructure. Proven experience handling real-world payment workflows and high-scale data processing.

CORE SKILLS

- **Backend Development:** Node.js, TypeScript, NestJS, Java Spring Boot, Laravel
 - **Database:** PostgreSQL, MySQL, Oracle
 - **Architecture:** Microservices, REST API, Distributed Systems
 - **Security:** JWT, HMAC Signature, RBAC, Webhook Security
 - **Payments Domain:** Payment Gateway, Merchant Aggregator, Clearing & Settlement
 - **Architecture:** Microservices, REST API, Distributed Systems, System Integration
 - **Security:** JWT, HMAC Signature, RBAC, Webhook Security
 - **Payments Domain:** Payment Gateway, Merchant Integration, Clearing & Settlement
 - **Enterprise:** Oracle WebLogic, Tuxedo (WTC), Legacy Integration
-

PROFESSIONAL EXPERIENCE

PT Akez Djaja Investama | (Hybrid) Backend Developer | Sep 2024 - Present

1. Payment Gateway / Merchant Aggregator
 - Developed a **payment gateway and merchant aggregator platform (Manapay)** to support secure merchant onboarding, transaction orchestration, and multi-provider payment integration

- Built scalable backend services using **microservices architecture** and exposed APIs for external merchant integration
- Implemented secure API mechanisms including **JWT authentication, HMAC/signature validation, and webhook security**
- Developed core payment workflows such as **purchase, withdrawal, disbursement, settlement, and reconciliation**
- Designed merchant onboarding flows with automated provisioning of credentials and configuration
- Built internal service communication using **TCP-based microservices**

2. Kualiva (Merchant Directory Platform)

- Developed backend services for a **location-based merchant platform** using geolocation (latitude & longitude)
- Implemented filtering and discovery features (distance, rating, price, etc.)
- Designed scalable architecture using **NestJS, Prisma, PostgreSQL, and MongoDB**

Cranium Indonesia | (Hybrid) Software Engineer | Oct 2023 - Feb 2026

1. BAIS Web – Legacy System Modernization

- Contributed to modernization of legacy desktop system (**Tobesoft XPlatform**) into web-based platform
- Developed backend services using **Spring Boot** and integrated with legacy systems via **Oracle WebLogic & Tuxedo (WTC)**
- Designed service layers bridging **modern HTTP APIs with legacy string-based protocols**
- Supported frontend-backend integration and enterprise architecture standardization

2. PMFTC – Philip Morris International Project

- Optimized database queries handling **millions of records** for reporting systems
- Improved performance through **indexing strategies and query restructuring**
- Supported high-volume data processing and reporting workflows

Cranium Indonesia | (Hybrid) Management Trainee | Oct 2022 - Oct 2023

1. BCAP Acquirer Payment System (Clearing & Settlement)

- Contributed to backend development of **acquirer payment system** supporting transaction processing and settlement

- Maintained modules for **transaction summaries, reporting, and settlement flows**
- Assisted in **System Integration Testing (SIT)** and validation of payment processing

2. KSEI – Financial Platform

- Developed RESTful APIs using **Spring Boot** for financial modules (Beneficiary Account, Area Code, Account Restriction)
- Implemented validated CRUD operations ensuring **data integrity and consistency**
- Maintained alignment with enterprise architecture and business requirements

Cranium Indonesia | (Remote) Full Stack Developer Intern | Jan 2022 - Oct 2022

Alterra Academy | (Remote) Flutter Developer Intern | Aug 2022 - Dec 2022

- Certified independent study / Studi Independent Bersertifikat which is part of Kampus Merdeka program

PROJECT HIGHLIGHTS

- Payment Gateway with merchant-facing APIs and multi-provider integration
- Microservices-based architecture for scalable systems
- Legacy system integration using WebLogic and Tuxedo
- High-performance database optimization for large datasets

EDUCATION

Universitas Multimedia Nusantara Bachelor of Information Technology | 2019 - 2023

ADDITIONAL

- Experience working in fintech and enterprise environments
- Strong understanding of payment systems and API security
